

# Hallucination Cascade Forecasting Results

Cleaned results report | Wilson 95% CIs | HalluHard x HallucinationResearchTest

## Status

Captured 43 / 100 seeds, 514 / 1200 branches. Domain mix of captured seeds: legal 18, research 25. Finish the run with --resume before treating percentages as final.

## Headline findings

On 43 complete seeds, verification recovers 3 times and dependency-seeking recovers 0 (same-seed McNemar). 3/43 seeds recover under verification AND entrench under dependency-seeking. Turn-1 CORRECT forecasts a CORRECT branch: 20/32 (62%).

## Aggregate (Wilson 95% CI in brackets)

| category           | n  | DROP             | CORRECT        | REPEAT           | DEPEND        |
|--------------------|----|------------------|----------------|------------------|---------------|
| dependency-seeking | 43 | 6 (14%) [7-27]   | 0 (0%) [0-8]   | 35 (81%) [67-90] | 2 (5%) [1-15] |
| neutral            | 43 | 20 (47%) [33-61] | 5 (12%) [5-24] | 18 (42%) [28-57] | 0 (0%) [0-8]  |
| verification       | 43 | 3 (7%) [2-19]    | 3 (7%) [2-19]  | 37 (86%) [73-93] | 0 (0%) [0-8]  |

## By domain

| domain   | n   | DROP             | CORRECT       | REPEAT            | DEPEND       |
|----------|-----|------------------|---------------|-------------------|--------------|
| research | 300 | 62 (21%) [16-26] | 17 (6%) [4-9] | 213 (71%) [66-76] | 8 (3%) [1-5] |
| legal    | 214 | 8 (4%) [2-7]     | 10 (5%) [3-8] | 189 (88%) [83-92] | 7 (3%) [2-7] |

## By seed class

| seed class        | n   | DROP             | CORRECT       | REPEAT            | DEPEND       |
|-------------------|-----|------------------|---------------|-------------------|--------------|
| hallucinating     | 300 | 62 (21%) [16-26] | 17 (6%) [4-9] | 213 (71%) [66-76] | 8 (3%) [1-5] |
| not_hallucinating | 214 | 8 (4%) [2-7]     | 10 (5%) [3-8] | 189 (88%) [83-92] | 7 (3%) [2-7] |

## By domain group

| domain group | n   | DROP             | CORRECT       | REPEAT            | DEPEND       |
|--------------|-----|------------------|---------------|-------------------|--------------|
| research     | 300 | 62 (21%) [16-26] | 17 (6%) [4-9] | 213 (71%) [66-76] | 8 (3%) [1-5] |
| other        | 214 | 8 (4%) [2-7]     | 10 (5%) [3-8] | 189 (88%) [83-92] | 7 (3%) [2-7] |

## Same-seed McNemar

| contrast                           | metric        | a_only | b_only | chi2  | p        |
|------------------------------------|---------------|--------|--------|-------|----------|
| verification vs dependency-seeking | CORRECT       | 3      | 0      | 1.33  | 0.248    |
| verification vs neutral            | CORRECT       | 3      | 5      | 0.12  | 0.724    |
| dependency-seeking vs neutral      | REPEAT+DEPEND | 21     | 2      | 14.09 | 0.000175 |
| dependency-seeking vs verification | REPEAT+DEPEND | 5      | 5      | 0.10  | 0.752    |

## What to update

Algoverse lecture (23 Aug 2026) ? do this in order

=====

1. Iterate small. Debug prompts on ~10 examples before any 100+ run:

python forecasting/generate\_seeds.py --pilot

python forecasting/pipeline.py tree --pilot --resume

Sending 100+ first creates expensive, untraceable errors.

2. Version prompts. All judge/follow-up text lives in

forecasting/prompts/pack.json. Do not recreate prompts in chat.

Re-run --pilot after any pack.json change.

3. Then scale the already-debugged pack:

python forecasting/pipeline.py tree --max-seeds 100 --levels 2 --resume

# Hallucination Cascade Forecasting Results

*Cleaned results report | Wilson 95% CIs | HalluHard x HallucinationResearchTest*

python forecasting/pipeline.py report

Honest reporting

=====

Do not cherry-pick. Every table includes DROP, CORRECT, REPEAT, and DEPEND.

Failures use the same Wilson CI format as successes. Incomplete seeds are listed by id; they are not silently dropped from n.

Do not overclaim. This run measures DROP/CORRECT/REPEAT/DEPEND on a 2-level D/N/V tree against the seed false claim. It does not "solve multi-step reasoning."

What else to keep

=====

- 50/50 Hallucinating vs Not Hallucinating, and 50/50 research vs legal/medical.
- Derive branch outcomes from DROP/CORRECT/REPEAT/DEPEND; do not mix vocabularies.
- Generate seeds with the model under test (GPT-OSS seeds for a GPT-OSS tree).
- Wilson 95% CIs and the domain split; the formatted PDF was an incomplete sample.
